Course Code	Course Title	Course Topics	Teacher s	No. of lecture s per topic	Total no. of lecture s
SH/MTH/ 101/C-1	Calculus, Geometry & Differential Equation	Unit 1 Hyperbolic functions, higher order derivatives, Leibnitz rule and its applications to problems of types $e^{ax+bsinx}$ , $e^{ax+bcosx}$ , $(ax + b)^n sinx$ , $(ax + b)^n sinx$ , $(ax + b)^n cosx$ , concavity and inflection points, envelopes, asymptotes, curve tracing in Cartesian coordinates, tracing in polar coordinates of standard curves, L'Hospital's rule, applications in business, economics and life sciences.	CDG	15	
		Unit 2	CDG	15	

Reduction formulae, derivations and illustrations of reduction formulae of the type $\int sin^n x  dx$ , $\int cos^n x  dx$ , $\int tan^n x  dx$ , $\int sec^n x  dx \int (log x)^n  dx$ , $\int sin^m x cos^n x  dx$ , parametric equations, parameterizing a curve, arc length, arc length of parametric curves, area of surface of revolution. Techniques of sketching conics.			
Unit 3 Reflection properties of conics, rotation of axes and second degree equations, classification of conics using the discriminant, polar equations of conics. Spheres. Cylindrical surfaces. Central conicoids, paraboloids, plane sections of conicoids, Generating lines, classification of quadrics, Illustrations of graphing standard quadric surfaces like cone, ellipsoid.	MN	15	
Cone, ellipsoid. Unit 4 Differential equations and mathematical models. General, particular, explicit, implicit and singular	AI	15	60

		solutions of a differential equation. Exact differential equations and integrating factors, separable equations and equations reducible to this form, linear equation and Bernoulli equations, special integrating factors and transformations.		
SH/MTH/	Algebra	<b>Unit 1</b> Polar representation	AI	15
102/C-2		of complex numbers,		
		nth roots of unity, De		
		Moivre's theorem for		
		rational indices and		
		its applications.		
		Theory of equations:		
		Relation between roots and		
		coefficients,		
		Transformation of		
		equation, Descartes		
		rule of signs, Cubic		
		and biquadratic		
		equation.		
		Inequality: The		
		inequality involving		
		AM≥GM≥HM,		
		Cauchy-Schwartz inequality.		
		Unit 2	AI	15
		Equivalence		10
		relations. Functions,		
		Composition of		
		functions, Invertible		
		functions, One to one		
		correspondence and		
		cardinality of a set.		
		Well-ordering		

property of positive			
integers, Division			
algorithm, Divisibility			
and Euclidean			
algorithm.			
Congruence relation			
between integers.			
Principles of			
Mathematical			
Induction, statement			
of Fundamental			
Theorem of			
Arithmetic.

### SEMESTER – VI

Course Code	Course Title	Course Topics	Teacher s	No. of lecture s per topic	Total no. of lecture s
SH/MTH /Metric601/C-13Spaces andComplexAnalysis	Spaces and Complex	Unit 1 Metric spaces: Sequences in metric spaces, Cauchy sequences. Complete Metric Spaces, Cantor's theorem.	RB	15	
		Unit 2 Continuous mappings, sequential criterion and other characterizations of continuity. Uniform continuity. Uniform continuity. Connectedness, connected subsets of R. Compactness: Sequential compactness, Heine- Borel property, Totally bounded spaces, finite intersection property, and continuous functions on compact sets. Homeomorphism. Contraction mappings. Banach Fixed point Theorem and its application to ordinary differential equation.	RB	15	

Unit 3	AI	15	
Limits, Limits			
involving the point at			
infinity, continuity.			
Properties of			
complex numbers,			
regions in the			
complex plane,			
functions of complex			
variable, mappings.			
Derivatives,			
differentiation			
formulas, Cauchy-			
Riemann equations,			
sufficient conditions			
for differentiability.			
Unit 4	AI	15	
Analytic functions,			
examples of analytic			
functions,			
exponential function,			
Logarithmic function,			
trigonometric			
function, derivatives			
of functions, and			
definite integrals of			
functions. Contours,			
Contour integrals and			
its examples, upper			
bounds for moduli of			
contour integrals.			
Cauchy- Goursat			
theorem, Cauchy			
integral formula.			
Unit 5	AI	15	
Liouville's theorem			
and the fundamental			
theorem of algebra.			
Convergence of			
sequences and			
series, Taylor series			
and its examples.			
Unit 6	AI	15	90
Laurent series and its			

		avamplas abs-lut-			
		examples, absolute and uniform			
		convergence of			
		power series.			
SH/MTH /	Ring Theory	Unit 1	RB	15

	Algebra II	commutative rings,			
		division algorithm			
		and consequences,			
		principal ideal			
		domains,			
		factorization of			
		polynomials,			
		reducibility tests,			
		irreducibility tests,			
		Eisenstein criterion,			
		and unique factorization in Z [x].			
		Divisibility in integral			
		domains, irreducible,			
		primes, unique factorization			
		domains, Euclidean			
		domains, Euclidean domains.			
		Unit 2	CDG	15	
		Dual spaces, dual			
		basis, double dual,			
		transpose of a linear transformation and			
		its matrix in the dual			
		basis, annihilators.			
		Eigen spaces of a			
		linear operator,			
		diagonalizability,			
		invariant subspaces			
		and Cayley-Hamilton			
		theorem, the minimal			
		polynomial for a			
		linear operator,			
		canonical forms.			
		Unit 3	CDG		
		Inner product spaces	CDG		
		and norms, Gram-			
		Schmidt			
		Schinict			

SH/MTH / 603/ DSE-3	Number Theory (DSE T7)	orthogonalisation process, orthogonal complements, Bessel's inequality, the adjoint of a linear operator. Least Squares Approximation, minimal solutions to systems of linear equations. Normal and self-adjoint operators. Orthogonal projections and Spectral theorem. <b>Unit 1</b> Linear Diophantine equation, prime counting function,	MN		
		statement of prime number theorem, Goldbach conjecture, linear congruences, complete set of residues, Chinese Remainder theorem, Fermat's Little theorem, Wilson's theorem.			
		Unit 2 Number theoretic functions, sum and number of divisors, totally multiplicative functions, definition and properties of the Dirichlet product, the Mobius Inversion formula, the greatest integer function, Euler's phi - function, Euler's theorem, reduced set of	MN	15	

		properties of Euler's phi-function.			
		Unit 3	MN	20	50
		Order of an integer			
		modulo n, primitive			
		roots for primes,			
		composite numbers			
		having primitive			
		roots, Euler's			
		criterion, the			
		Legendre symbol and			
		its properties,			
		quadratic reciprocity,			
		quadratic			
		congruences with			
		composite moduli.			
		Public key			
		encryption, RSA			
		encryption and			
		decryption, the			
		equation $x^2 + y^2 = z^2$ ,			
		Fermat's Last			
		theorem.
