Course Code	Course Title	Course Topics	Teacher s	No. of lecture s per topic	Total no. of lecture s
SH/MTH/ 101/C-1	Calculus, Geometry & Differential Equation	Unit 1 Hyperbolic functions, higher order derivatives, Leibnitz rule and its applications to problems of types $e^{ax+bsinx}$, $e^{ax+bcosx}$, $(ax + b)^n sinx$, $(ax + b)^n cosx$, concavity and inflection points, envelopes, asymptotes, curve tracing in Cartesian coordinates, tracing in polar coordinates of standard curves, L'Hospital's rule, applications in business, economics and life sciences.	CDG	15	
		Unit 2 Reduction formulae, derivations and illustrations of reduction formulae of	CDG	15	

models. General, particular, explicit, implicit and singular solutions of a differential equation. Exact differential equations and			
Unit 4 Differential equations and mathematical	CDG	15	60
Generating lines, classification of quadrics, Illustrations of graphing standard quadric surfaces like cone, ellipsoid.			
discriminant, polar equations of conics. Spheres. Cylindrical surfaces. Central conicoids, paraboloids, plane sections of conicoids,			
Reflection properties of conics, rotation of axes and second degree equations, classification of conics using the	RB		
the type $\int sin^n x dx$, $\int cos^n x dx$, $\int tan^n x dx$, $\int sec^n x dx \int (logx)^n dx$ $, \int sin^m x cos^n x dx$, parametric equations, parameterizing a curve, arc length, arc length of parametric curves, area of surface of revolution. Techniques of sketching conics.Unit 3			

		integrating factors, separable equations and equations reducible to this form, linear equation and Bernoulli equations, special integrating factors and transformations.			
SH/MTH/ 102/ C-2	Algebra	Unit 1Polar representationof complex numbers,nth roots of unity, DeMoivre's theorem forrational indices andits applications.Theory of equations:Relation betweenroots andcoefficients,Transformation ofequation, Descartesrule of signs, Cubicand biquadraticequation.Inequality: Theinequality involving $AM \ge GM \ge HM$,Cauchy-Schwartzinequality.	AI	15	
		Unit 2 Equivalence relations. Functions, Composition of functions, Invertible functions, One to one correspondence and cardinality of a set. Well-ordering property of positive	AI	15	

SH/MTH/	Calculus,	Unit 1	CDG	15	
		of a matrix			
		in finding the inverse			
		theorem and its use			
		Cayley-Hamilton			
		Equation of a matrix.			
		and Characteristic			
		values, Eigen Vectors			
		of a matrix, Eigen			
		subspaces of R ⁿ , rank			
		dimension of			
		Subspaces of R ⁿ ,			
		invertible matrices.			
		inverse of a matrix, characterizations of			
		transformation,			
		matrix of a linear			
		transformations,			
		Introduction to linear			
		Unit 4	MN	15	60
		linear independence.			
		of linear systems,			
		systems, applications			
		solution sets of linear			
		equation Ax=b,			
		equations, the matrix			
		echelon forms, vector			
		reduction and			
		equations, row			
		Systems of linear		13	
		Unit 3	MN	15	
		Arithmetic.			
		Theorem of			
		Induction, statement of Fundamental			
		Mathematical			
		Principles of			
		between integers.			
		Congruence relation			
		algorithm.			
		and Euclidean			
		algorithm, Divisibility			
		integers, Division			

103/ GE-1	Geometry & Differential Equation (GE T1)	Hyperbolic functions, higher order derivatives, Leibnitz rule and its applications to problems of types $e^{ax+bsinx}$, $e^{ax+bcosx}$, $(ax + b)^n sinx$, $(ax + b)^n sinx$, $(ax + b)^n cosx$, concavity and inflection points, envelopes, asymptotes, curve tracing in Cartesian coordinates, tracing in polar coordinates of standard curves, L'Hospital's rule, applications in business, economics and life sciences.			
		Unit 2 Reduction formulae, derivations and illustrations of reduction formulae of the type $\int sin^n x dx$, $\int cos^n x dx$, $\int tan^n x dx$, $\int sec^n x dx \int (log x)^n dx$, $\int sin^m x cos^n x dx$, parametric equations, parameterizing a curve, arc length, arc length of parametric curves, area of surface of revolution. Techniques of	CDG	15	
		sketching conics. Unit 3 Reflection properties of conics, rotation of axes and second	CDG	15	

		degree equations,			
		classification of conics using the			
		discriminant, polar			
		equations of conics.			
		Spheres. Cylindrical			
		surfaces. Central			
		conicoids,			
		paraboloids, plane			
		sections of conicoids,			
		Generating lines,			
		classification of			
		quadrics, Illustrations			
		of graphing standard			
		quadric surfaces like			
		cone, ellipsoid.			
		Unit 4	CDG	15	60
		Differential equations			
		and mathematical			
		models. General,			
		particular, explicit,			
		implicit and singular			
		solutions of a			
		differential equation.			
		Exact differential			
		equations and			
		integrating factors,			
		separable equations			
		and equations			
		reducible to this			
		form, linear equation and Bernoulli			
		equations, special			
		integrating factors			
		and transformations.

	algorithm.			
The tentative dates of the In	τ ο			

The tentative dates of the Internal Assessment will be in June 2021.

SEMESTER – V						
Course Code	Course Title	Course Topics	Teacher s	No. of lecture s per topic	Total no. of lecture s	
SH/MTH /	Partial	Unit 1	RB	15		
501/C-11	Differential	Partial Differential				
	Equations and Applications	Equations – Basic concepts and Definitions. Mathematical Problems. First- Order Equations: Classification, Construction and Geometrical Interpretation. Method of Characteristics for obtaining General				

	[1 1	
Solution of Quasi			
Linear Equations.			
Canonical Forms of			
First-order Linear			
Equations. Method of			
Separation of			
Variables for solving			
first order partial			
differential			
equations.			
Unit 2	RB	15	
Derivation of Heat		13	
equation, Wave			
equation, wave			
equation.			
Classification of			
second order linear			
equations as			
hyperbolic, parabolic			
or elliptic. Reduction			
of second order			
Linear Equations to			
canonical forms.			
	RB	15	
canonical forms.	RB	15	
canonical forms. Unit 3	RB	15	
canonical forms. Unit 3 The Cauchy problem,	RB	15	
canonical forms. Unit 3 The Cauchy problem, Cauchy-	RB	15	
canonical forms. Unit 3 The Cauchy problem, Cauchy- Kowalewskaya	RB	15

canonical forms. Unit 3 The Cauchy problem, Cauchy- Kowalewskaya theorem, Cauchy problem of an infinite	RB	15	
canonical forms. Unit 3 The Cauchy problem, Cauchy- Kowalewskaya theorem, Cauchy problem of an infinite string. Initial	RB	15	
canonical forms. Unit 3 The Cauchy problem, Cauchy- Kowalewskaya theorem, Cauchy problem of an infinite string. Initial Boundary Value Problems. Semi-	RB	15	
canonical forms. Unit 3 The Cauchy problem, Cauchy- Kowalewskaya theorem, Cauchy problem of an infinite string. Initial Boundary Value Problems. Semi- Infinite String with a	RB	15	
canonical forms. Unit 3 The Cauchy problem, Cauchy- Kowalewskaya theorem, Cauchy problem of an infinite string. Initial Boundary Value Problems. Semi- Infinite String with a fixed end, Semi-	RB	15	
canonical forms. Unit 3 The Cauchy problem, Cauchy- Kowalewskaya theorem, Cauchy problem of an infinite string. Initial Boundary Value Problems. Semi- Infinite String with a fixed end, Semi- Infinite String with a	RB	15	
canonical forms. Unit 3 The Cauchy problem, Cauchy- Kowalewskaya theorem, Cauchy problem of an infinite string. Initial Boundary Value Problems. Semi- Infinite String with a fixed end, Semi- Infinite String with a Free end. Equations	RB	15	
canonical forms. Unit 3 The Cauchy problem, Cauchy- Kowalewskaya theorem, Cauchy problem of an infinite string. Initial Boundary Value Problems. Semi- Infinite String with a fixed end, Semi- Infinite String with a Free end. Equations with non-	RB	15	
canonical forms. Unit 3 The Cauchy problem, Cauchy- Kowalewskaya theorem, Cauchy problem of an infinite string. Initial Boundary Value Problems. Semi- Infinite String with a fixed end, Semi- Infinite String with a Free end. Equations with non- homogeneous	RB	15	
canonical forms. Unit 3 The Cauchy problem, Cauchy- Kowalewskaya theorem, Cauchy problem of an infinite string. Initial Boundary Value Problems. Semi- Infinite String with a fixed end, Semi- Infinite String with a Free end. Equations with non- homogeneous boundary conditions.	RB	15	
canonical forms. Unit 3 The Cauchy problem, Cauchy- Kowalewskaya theorem, Cauchy problem of an infinite string. Initial Boundary Value Problems. Semi- Infinite String with a fixed end, Semi- Infinite String with a Free end. Equations with non- homogeneous boundary conditions. Non- Homogeneous	RB	15	
canonical forms. Unit 3 The Cauchy problem, Cauchy- Kowalewskaya theorem, Cauchy problem of an infinite string. Initial Boundary Value Problems. Semi- Infinite String with a fixed end, Semi- Infinite String with a Free end. Equations with non- homogeneous boundary conditions. Non- Homogeneous Wave Equation.	RB	15	
canonical forms. Unit 3 The Cauchy problem, Cauchy- Kowalewskaya theorem, Cauchy problem of an infinite string. Initial Boundary Value Problems. Semi- Infinite String with a fixed end, Semi- Infinite String with a Free end. Equations with non- homogeneous boundary conditions. Non- Homogeneous Wave Equation. Method of separation	RB	15	
canonical forms. Unit 3 The Cauchy problem, Cauchy- Kowalewskaya theorem, Cauchy problem of an infinite string. Initial Boundary Value Problems. Semi- Infinite String with a fixed end, Semi- Infinite String with a Free end. Equations with non- homogeneous boundary conditions. Non- Homogeneous Wave Equation.	RB	15	

		Problem. Solving the Heat Conduction problem Unit 4 Central force. Constrained motion, varying mass, tangent and normal components of acceleration, modelling ballistics and planetary motion, Kepler's second law.	RB	15	60
SH/MTH /	Group	Unit 1	MN	15	
502/C-12	Theory - II	Automorphism, inner automorphism, automorphism groups, automorphism groups of finite and infinite cyclic groups, applications of factor groups to automorphism groups, Characteristic subgroups, Commutator subgroup and its properties.			
		Unit 2 Properties of external direct products, the group of units modulo n as an external direct product, internal direct products, Fundamental Theorem of finite abelian groups.	MN	15	
		Unit 3 Group actions, stabilizers and	MN	15	

		kernels, permutation representation associated with a given group action. Applications of group actions. Generalized Cayley's theorem. Index theorem. Unit 4	MN	15	60
		Groups acting on themselves by conjugation, class equation and consequences, conjugacy in Sn, p- groups, Sylow's theorems and consequences, Cauchy's theorem, Simplicity of An for n ≥ 5, non-simplicity tests.			
SH/MTH /	Linear	Unit 1	CD	15	
503/DSE-1	Programmin	Introduction to linear			
	g (DSE T1)	programming problem. Theory of simplex method, graphical solution, convex sets, optimality and unboundedness, the simplex algorithm, simplex method in tableau format, introduction to artificial variables, two - phase method. Big - M method and their comparison.			

		oconomia			
		economic			
		interpretation of the dual.			
		Transportation			
		problem and its			
		mathematical			
		formulation,			
		northwest - corner			
		method, least cost			
		method and Vogel			
		approximation			
		method for			
		determination of			
		starting basic			
		solution, algorithm			
		for solving			
		transportation			
		problem, assignment			
		problem and its			
		mathematical			
		formulation,			
		Hungarian method			
		for solving			
		assignment problem.

Continuous			
mappings, sequential			
criterion and other			
characterizations of			
continuity. Uniform			
continuity.			
Connectedness,			
connected subsets of			
R.			
Compactness:			
Sequential			
compactness, Heine-			
Borel property,			
Totally bounded			
spaces, finite			
intersection property,			
and continuous			
functions on compact			
sets.			
Homeomorphism.			
Contraction			
mappings. Banach			
Fixed point Theorem			
and its application to			
ordinary differential			
equation.			
Unit 3	RB	15	
Limits, Limits			
involving the point at			
infinity, continuity.			
Properties of			
complex numbers,			
regions in the			
complex plane,			
functions of complex			
variable, mappings.			
		1	
Derivatives,			
differentiation			
differentiation formulas, Cauchy-			
differentiation formulas, Cauchy- Riemann equations,			
differentiation formulas, Cauchy- Riemann equations, sufficient conditions			
differentiation formulas, Cauchy- Riemann equations,			

		Analytic functions,			
		examples of analytic			
		functions,			
		exponential function,			
		Logarithmic function,			
		trigonometric			
		function, derivatives			
		of functions, and			
		definite integrals of			
		functions. Contours,			
		Contour integrals and			
		its examples, upper			
		bounds for moduli of			
		contour integrals.			
		Cauchy- Goursat			
		theorem, Cauchy			
		integral formula.			
		Unit 5	RB	15	
		Liouville's theorem			
		and the fundamental			
		theorem of algebra.			
		Convergence of			
		sequences and			
		series, Taylor series			
		and its examples.			
		Unit 6	RB	15	90
		Laurent series and its			
		examples, absolute			
		and uniform			
		convergence of			
		power series.			
SH/MTH /	Ring Theory	Unit 1	CDG	15	
602/C-14	and Linear	Polynomial rings over			
	Algebra II	commutative rings,			
		division algorithm			
		and consequences,			
		principal ideal			
		domains, factorization of			
		polynomials, reducibility tests,			
		irreducibility tests,			
		Eisenstein criterion,			
		and unique			

SH/MTH /	Number	Unit 1	MN	15	
		Spectral theorem.			
		projections and			
		Orthogonal			
		operators.			
		and self-adjoint			
		equations. Normal			
		systems of linear			
		minimal solutions to			
		Approximation,			
		Squares			
		operator. Least			
		the adjoint of a linear			
		complements, Bessel's inequality,			
		process, orthogonal			
		orthogonalisation			
		Schmidt			
		and norms, Gram-			
		Inner product spaces			
		Unit 3	CDG	20	50
		canonical forms.	<u> </u>		
		linear operator,			
		polynomial for a			
		theorem, the minimal			
		and Cayley-Hamilton			
		invariant subspaces			
		diagonalizability,			
		linear operator,			
		Eigen spaces of a			
		basis, annihilators.			
		its matrix in the dual			
		transformation and			
		transpose of a linear			
		basis, double dual,			
		Dual spaces, dual	CDG	15	
		Unit 2		15	
		domains, Euclidean			
		domains, Euclidean			
		primes, unique factorization			
		domains, irreducible,			
		Divisibility in integral			
		factorization in Z [x].			

603/DSE-	Theory (DSE	Linear Diophantine equation, prime			
3	T7)	counting function,			
		statement of prime			
		number theorem,			
		Goldbach conjecture,			
		linear congruences,			
		complete set of			
		residues, Chinese			
		Remainder theorem,			
		Fermat's Little			
		theorem, Wilson's			
		theorem.			
		Unit 2	MN	15	
		Number theoretic			
		functions, sum and			
		number of divisors,			
		totally multiplicative			
		functions, definition			
		and properties of the			
		Dirichlet product, the			
		Mobius Inversion			
		formula, the greatest			
		integer function,			
		Euler's phi - function,			
		Euler's theorem,			
		reduced set of residues. some			
		properties of Euler's			
		phi-function.			
		Unit 3	MN	20	E0
		Order of an integer	IVIIN	20	50
		modulo n, primitive			
		roots for primes,			
		composite numbers			
		having primitive			
		roots, Euler's			
		criterion, the			
		Legendre symbol and			
		its properties,			
		quadratic reciprocity,			
		quadratic			
		congruences with			
		composite moduli.			

		Public key encryption, RSA encryption and decryption, the equation $x^2 + y^2 = z^2$, Fermat's Last theorem.
